The COASTAL project is focused on developing innovative tools, approaches, and policy recommendations to support rural and coastal development. The project partners will host a workshop on participatory modelling and the use of Causal Loop Diagrams and other techniques to strengthen international collaboration and knowledge exchange. Joint workshops of the participating Multi Actor Analysis of Land Use-Related Impacts (MALs) on rural areas in the Baltic Sea region will be held, where local stakeholders will be involved in the development of ambitious visions of their regions. As part of WP5, ICRE8 and Greenbridge are working closely with VITO (WP4 leader) and the MALs on formulating and evaluating business solutions and policy recommendations for visualizing transition pathways and implementing a systems thinking approach. The workshop will also cover the integration of Land System Interactions (LSIs) into Multi-Sectoral Planning (MSP) in the Baltic Sea region. The COASTAL project has received funding from the European Union’s Horizon 2020 research and innovation programme under grant agreement No. 871048.
